Maximize full text retrieval in **ENDNOTE**

In EndNote versions X and later, choosing **Find Full Text** in the **References** menu launches an attempt to find full-text PDFs for journal articles in your EndNote library.

In versions X3 and later, adding OpenURL information to your EndNote configuration as follows can enhance this search:

1. In EndNote, select **Edit, Preferences**. Click on **Find Full Text**. Check off these items:
   - ISI Web of Knowledge Full Text Links
   - DOI (Digital Object Identifier)
   - OpenURL

2. In the **OpenURL Path** window, enter
   ```
   &authtype=ip&
   ```

3. To facilitate full text retrieval from off-campus, complete the Authenticate with: section by entering:
   ```
   ```

   This is the HSLS EZProxy URL. You will be prompted to enter your Pitt account ID and password as needed to complete authentication when off campus.

4. Click on **Apply**, then on **OK**.
